

THE MICROGRAFTING APPROACH FOR SCALP REGENERATION AND HAIR RESTORATION

Pierre BOUHANNA M.D. (Paris)

INTRODUCTION:

The only goal of all the various hair treatments is not only to get the immediate satisfaction of your patient but also a good understanding of his baldness evolution with a follow-up and appropriate treatments.

OBJECTIVE:

For scalp regeneration or hair transplantation you need to collect all the hair and scalp parameters and select one or various adequate procedures.

MATERIALS AND METHODS:

- Objective evaluation:

- digital trichoscopy (Tricholab[®])
- digital phototrichogram (Trichoscale[®])
- multifactorial classification
- treatment plan

- scalp regeneration:

- PRP – cell treatment (Rigenera[®])
- Microneedling – LLT

- Scalp transplantation:

- FUE manual – automatic - robotic
- FUT or FUL long hair strip procedure

RESULTS:

CONCLUSION:

To get the best improvement with scalp regeneration or hair transplantation it is essential to handle all the procedures and to select them according to a precise individual hair and scalp check-up and an appropriate treatment plan.
